CESAR - The Official Construction and Agricultural Equipment Security & Registration Scheme

Unique Plant Identification Plate

Forming a major part of the visible deterrent these indicate to potential criminals that Datatag genuinely protects your machine and there is a high risk of it being traced should they steal it. Datatag will take legal action against any copying or unauthorised production of these unique ID plates that contain Datatag's world wide registered trademark.

Glass Transponders

This transponder is roughly the size of a grain of rice. It contains a unique code number which is permanently programmed into its integrated circuit. The number cannot be altered or deleted.

Flat Transponders

The flexible flat transponder contains a unique code, permanently programmed into its integrated circuit, which cannot be altered or deleted and is impervious to either electronic or magnetic attack.

Datadots®

A superior microdot identification system developed for ease of use. The Datadots® can be applied to any surface, thus making it virtually impossible for the criminals to locate and remove them all.

Forensic DNA

A unique chemical DNA solution. Each piece of equipment is protected with an invisible and unique DNA code. Criminals will have to be confident they have removed every molecule of Datatag DNA.
